

Respondus LockDown Browser

Student Download Instructions

What is Respondus LockDown Browser?

The **Respondus LockDown Browser™** is a special browser used for taking secure, proctored Kaplan Nursing exams. It blocks your ability to do anything else on your computer while the exam is in progress.

All Kaplan Integrated Tests require Respondus LockDown Browser, so you will need to install it on whatever computer you take your tests on.

How do I download and install Respondus LockDown Browser onto my personal computer?

If you have never installed Respondus LockDown Browser on the computer you are using, you will need to do this **prior to taking** your first Integrated Test that requires it. Simply click the Download link for your personal computer (shown below) and follow the prompts.

- [MAC](#)
- [Windows Non-Lab Edition](#)

Or, the link to download Respondus Lockdown Browser will also be provided on your Kaplan Integrated Testing Page once Respondus has been activated for your school, and you can download from there if necessary.

NOTE: LockDown Browser is a one-time download. Once installed, you will not need to install again for future Kaplan exams requiring the LockDown Browser.
